

## Fruit Tree/Bush/Vines - thgc.net - 903-753-2223

| FRUIT  | These are the varieties we have carried in the past/present. We are not guaranteed to get the same variety in stock.        | Need Pollinator? |
|--|---|------------------|
| Note: All fruiting plants will produce more with a pollinator & CH = Chill hours required to produce |   |                  |
| <b>Peach</b>   | <b>Space 18' to 25' apart. - TREE FARM</b>  |                  |
| <b>Junegold - 450ch</b>  | Ripens in late may/early June. Good size yellow flesh peach with strong market acceptance. <i>Clingstone</i>                | NO               |
| <b>Redskin - 750ch</b>   | Ripens in mid-July. Yellow flesh and almost solid red skin. <i>Freestone</i>  | NO               |
| <b>Elberta - 800ch</b>   | Ripens in September. Juicy, yellow fresh. Great for canning and freezing. <i>Freestone</i>                                  | NO               |
| <b>Early Elberta - 750ch</b>   | Ripens in early July. Yellow flesh peach and golden yellow red skin, large tree. <i>Freestone</i>                           | NO               |
| <b>Florida King - 300ch</b>  | Ripens in mid May. Good flavor. Yellow skin/red blush. <i>Clingstone</i>  | NO               |
| <b>Harvester - 750ch</b>   | Ripens in June. One of the highest yielding. Reddish-yellow fruit with yellow, sweet flesh. <i>Freestone</i>                | NO               |
| <b>Florida Prince - 150ch</b>  | Ripens in late may/early June. Golden flesh with red blush skin. <i>Semi-Freestone</i>                                      | NO               |
| <b>Sam Houston - 500ch</b>   | Ripens in June. Yellow skin/red blush with yellow flesh. <i>Freestone</i>   | NO               |
| <b>Apple</b>   | <b>25' to 30' apart. - TREE FARM</b>  |                  |
| <b>Gala - 600ch</b>  | Ripens in September. Make large crisp apple. Good pollinator variety  | YES              |
| <b>Red Delicious - 800ch</b>   | Ripens Mid-September to Mid-October. Tender, crisp, & sweet. Pollinate with Yellow Delicious.                               | YES              |
| <b>Yellow Delicious - 700ch</b>  | Ripens in late September. Yellow fruit, medium crispy fruit with a sweet taste. Dependable pollinator.                      | YES              |
| <b>Pink Lady - 600ch</b>   | Ripens in late October. Medium yellow/pink skin with unique tart/sweet flavor. Pollinate with Red Delicious                 | YES              |
| <b>Apricot</b>   | <b>15' to 18' apart - TREE FARM</b>   |                  |
| <b>Moorepark - 700ch</b>   | Ripens in early July to early August. Large, juicy, sweet-tasting apricots. <i>Freestone</i>                                | NO               |
| <b>Pear</b>  | <b>25' to 30' apart. - TREE FARM</b>  |                  |
| <b>Kieffer - 400ch</b>   | Ripens in late September/early October. Good fire blight resistance. Green/Yellow skin with white flesh                     | NO               |
| <b>Moonglow - 500ch</b>  | Ripens in August/September. High quality fruit with good fire blight resistance. Soft flesh                                 | YES              |
| <b>Orient - 300ch</b>  | Ripens late August. Large smooth round yellow fruit- red cheek and thick skin. Juicy /creamy-mild flavor.                   | YES              |
| <b>Ayers - 300ch</b>   | Ripens mid-August to September. High quality fruit with a few grit cells. Good fire blight resistance.                      | YES              |
| <b>Plum</b>  | <b>15' to 18' apart - TREE FARM</b>   |                  |
| <b>Bruce - 500ch</b>   | Late May. Large red plum for fresh eating or making jam. Must have pollinator. <i>Pollinates w/ Santa Rosa</i>              | YES              |
| <b>Santa Rosa - 500ch</b>  | Late May. Large red plum for fresh eating or making jam. Great pollinator. <i>Pollinates w/ Bruce or All Red</i>            | NO               |
| <b>Au Rosa - 700ch</b>   | Early July. Excellent quality fresh/canned. Disease/scald resistant. <i>Pollinates w/ Methley</i>                           | NO               |
| <b>Methley - 250ch</b>   | Early June. Medium sized deep purple with red flesh. Disease resistant <i>Pollinates w/ Au Rosa</i>                         | YES              |
| <b>Fig</b>   | <b>15' to 20' apart - Need enough chill hours to produce - IN OR IN FRONT OF GREEN HOUSE</b>                                |                  |
| <b>Little Miss Figgy - 100ch</b>   | Ripens in summer. Sweet, dark purple fruits.  | NO               |
| <b>LSU Purple - 200ch</b>  | Ripens in late June, and again in July through September. Medium-sized, glossy purple fruit. Mild flavor.                   | NO               |
| <b>Brown Turkey - 100ch</b>  | First small crop in late spring/early summer. Main harvest in early fall. Small to medium fruit, dark brown                 | NO               |
| <b>Persimmon</b>   | <b>15' to 25' apart - TREE FARM</b>   |                  |
| <b>Fuyu - 200ch</b>  | Non-astringent, Large round flattened reddish orange fruit. Need time to ripen but good to eat. Ripens in Oct.              | NO               |
| <b>Giant Fuyu - 200ch</b>  | Ripens in Sept to early winter. 2x the size of a normal persimmon, sweet, honey-mango flavor.                               | NO               |
| <b>Pomegranate</b>   | <b>5' to 6' apart - FLOWERING SECTION</b>   |                  |
| <b>Wonderful - 200ch</b>   | Ripens in September. Large red fruit in fall. Make beautiful flowers  | NO               |
| <b>Texas Pink - 200ch</b>  | Ripens in early Oct. Large, deep-pink fruits w/ leathery skin. Juicy flesh, unique sweet and tangy flavor.                  | NO               |
| <b>Pecans</b>  | <b>35' to 50' apart - ***pollinates in 5 mile radius so purchasing pollinator is not always necessary - all papershell.</b> |                  |
| NOTE: Pecans are very particular about the soil. We highly recommend using a soil amendment          |   |                  |
| <b>Pawnee - 400ch</b>  | Large nut. Early maturity and high kernel percentage  | Yes, but ***     |
| <b>Desirable - 500ch</b>   | Large nut. Bears early and heavy. Thin shell. Disease resistant.  | Yes, but ***     |
| <b>Kiowa - 400ch</b>   | Large nut. Fully-filled, plump kernels. Disease resistant.  | Yes, but ***     |
| <b>Almonds</b>   | <b>15' to 20' apart - Need enough chill hours to produce - TREE FARM</b>  |                  |
| <b>Nonpareil - 400ch</b>   | Heavy producer. Ripens August/September. Partial Self-Fertile. Larger yield with a pollinator.                              | NO, but***       |

We also HIGHLY recommend using soil amendment, root stimulator and treat them yearly in the early spring with a horticulture oil. Follow our pruning guide to maximize fruit production.
