FRUIT TREE TIPS:

	BARE-ROOT	CONTAINER
When to plant	Winter	Anytime (summer not preferable)
Best size to buy	3 to 5 ft tall	Between 1g to 5g

It is important with bare-root you buy as soon as they come in, otherwise you run the risk of them being dried out.

Here at THGC we decided to go with container plants, not only because of the versatility & health, but they are also older plants so they will produce years sooner than bare-root.

Map of plants available at thgc.net on mobile devices.

Growing from seeds: Many fruit seeds will grow but because most fruit trees are hybrids you will, most likely, get an inferior type of fruit tree that, if it does produce, will not produce for 3 to 5 years, will not be the same variety, and will not be resistant to disease or insects.

PLEASE NOTE: EVEN IF AN ITEM DOES NOT NEED A POLLINATOR,

ALL WILL PRODUCE MORE WITH ANOTHER VARIETY PLANTED WITH IT

***Please note, these items are ones that we regularly keep in stock, but it is not a guarantee that we will currently have it in. Please call to check on availability. (903) 753-2223
